EXPERT COLLECTION

Explore our leading medical review series
Introducing the

EXPERT COLLECTION

The Taylor & Francis Expert Collection is the world’s largest series of review journals in research, development, and clinical medicine.

The Expert Collection is comprised of 29 peer-reviewed journals combining the well-established Expert Opinion and Expert Review series into one essential and comprehensive collection.

What makes the Expert Collection different?

The Expert Collection combines the personal opinions of our expert authors who are all internationally recognized experts in their fields. They provide their insights about where research is now, where it should go next and how it should get there. In this respect, all Expert Collection reviews end with an expert opinion or an expert commentary, not a conclusion.

The Expert Collection publishes:

- Reviews
- Editorials
- Original research
- Drug evaluations
- Treatment evaluations
- Clinical trial evaluations
- Technology evaluations
- Patent evaluations
- Key paper evaluations
- Perspectives
- Special reports
- Mini reviews
- Letters to Editor
- Multimedia offering
- Video abstracts

“ In my opinion, the Expert Collection is the most relevant journal review series in the area of Pharmacology. The Expert Collection is a credible, topical, and scholarly resource that I have come to rely on in my role as a leader of international pharmacological studies. It is apparent that the peer review process is thorough and critical, and the editorial process is unparalleled in terms of author support. ”

Dr Roger McIntyre, University of Toronto, Editor-in-Chief
Expert Opinion on Drug Safety
The Expert Opinion journals cover the entire R&D pipeline across 11 journals.

DRUG DISCOVERY  PRECLINICAL  PHASE I  PHASE II  PHASE III  LAUNCH

The Expert Review journals cover 18 different areas of clinical medicine:

Anticancer Therapy  Anti-infective Therapy  Cardiovascular Therapy  Clinical Immunology
Clinical Pharmacology  Endocrinology & Metabolism  Gastroenterology & Hepatology
Hematology  Medical Devices  Molecular Diagnostics  Neurotherapeutics  Ophthalmology
Pharmacoeconomics & Outcomes Research  Proteomics  Precision Medicine & Drug Development
Quality of Life in Cancer Care  Respiratory Medicine  Vaccines

Our Ethics

Supported by industry experts, we remain vigilant against abuses in every title we publish.

Our content influences patient care decisions. With this comes enormous responsibility to safeguard the medical community from fraudulent or misleading data. We not only follow industry standards of publication ethics, but have taken a leading role in pushing them further.

In 2003, our sister journal, Current Medical Research & Opinion (CMRO) published the first Good Publication Practice (GPP) guidelines. The aim of the guidelines was to ensure that clinical trials sponsored by pharmaceutical companies were published in a responsible and ethical manner. The guidelines quickly established a common standard for all industry-sponsored research and continue to do so today.

We continue to take an active role in organizations that endorse publication ethics. In January 2010, we joined COPE.

Committee on Publication Ethics (COPE)
The Committee on Publication Ethics (COPE) is a charity registered in the UK. With over 7,000 members, it is concerned with the integrity of peer-reviewed publications in science, particularly biomedicine. COPE provides a forum for publishers and editors of scientific journals to discuss issues relating to the integrity of the work submitted to or published in their journals.

All Expert Collection titles are members of the Committee on Publication Ethics (COPE)

All Expert Collection titles are independently peer-reviewed and require full author disclosures

The Expert Collection adheres to the principles of Uniform Requirements for Manuscripts Submitted in Biomedical Journals, prepared by the ICMJE and the NLM guidelines for published articles and supplements

Uniform Requirements for Manuscripts Submitted to Biomedical Journals
Created by the International Committee of Medical Journal Editors (ICMJE), the Uniform Requirements address the ethical principles related to the process of evaluating, improving, and publishing manuscripts in biomedical journals, and the relationship among editors and authors, peer reviewers, and the media.

A copy of the most recent Uniform Requirements can be found at www.icjme.org.
Author Services

Accelerated Publication
For time-sensitive research. Fast Track ensures publication within 3-5 weeks and Rapid Track ensures your work is published within 5-7 weeks.

Reprints & ePrints
Clinical content published in Taylor & Francis journals can help you demonstrate the benefits of your products to your customers.

Supplements
Targeted, cost-effective and high-impact reach, connecting the topical and timely knowledge from your network of key opinion leaders with our global readership.

Discover the Taylor & Francis Medical Library
The Medical Library provides online access to a broad range of journal content in over 30 key subject areas. This collection includes current content from over 200 peer-reviewed academic journals.

HIGHLIGHTS...
- Current Medical Research & Opinion
- Medical Teacher
- Leukemia & Lymphoma
- Postgraduate Medicine

Subscription options for the Expert Collection

Expert Review Collection
A package including 18 of the Expert Review series journals.

Expert Opinion Collection
A package including 11 of the Expert Opinion series journals.

Title-by-title subscriptions
Tailor your collection on a title-by-title basis. You can choose from combined print and online access or opt for online only access.
